

JUSO

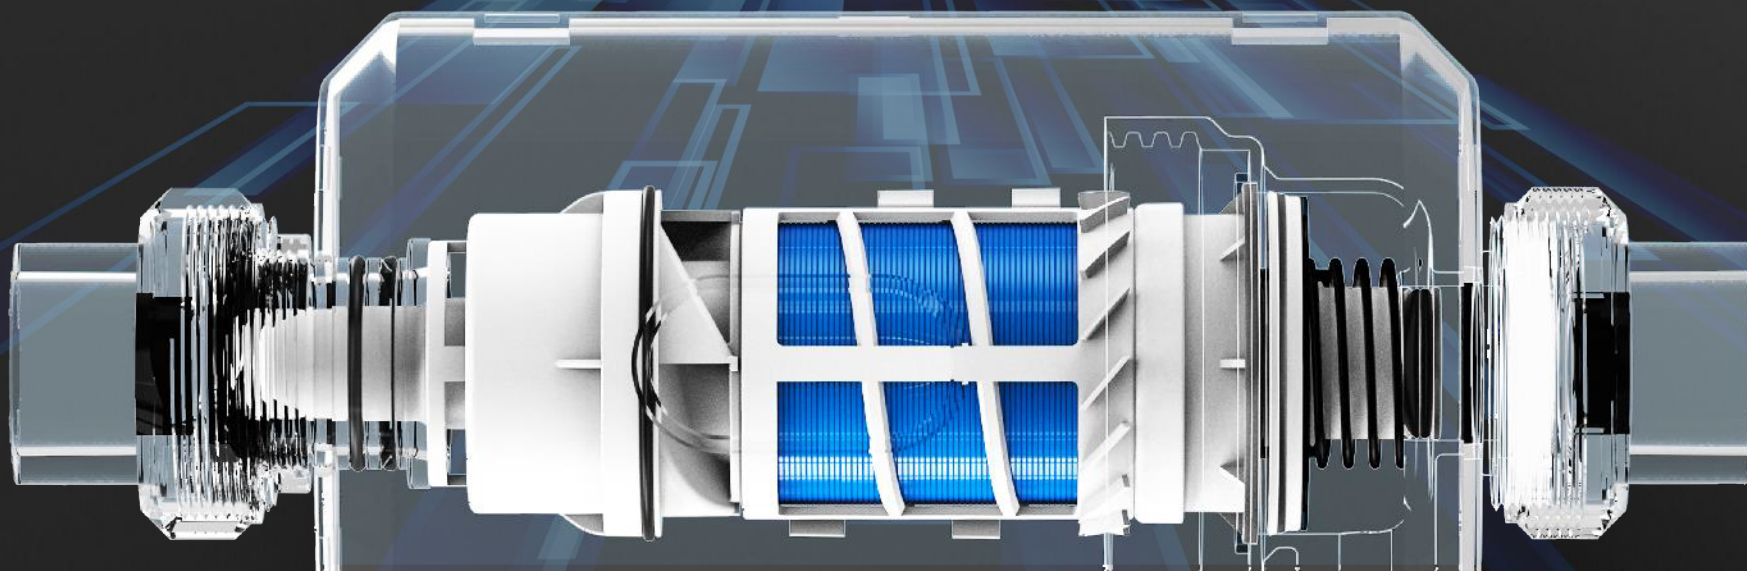

Dual filtration disc water prefilter

L N F Bionic composite antibacterial pre-filter technology with gradual tightening

Pre-processing Bionic Iterative Technology World Premiere

The Wolong Series

Dual filtration disc water prefilter

Better Water With Dual Filtration Unafraid of Clogging and Dirt-Resistant

LNF Bionic composite antibacterial pre-filter technology with gradual tightening

Dual filtration system with bionic lamination and plain weave dense mesh film, improved filtration and fouling resistance with large to small graded filtration.

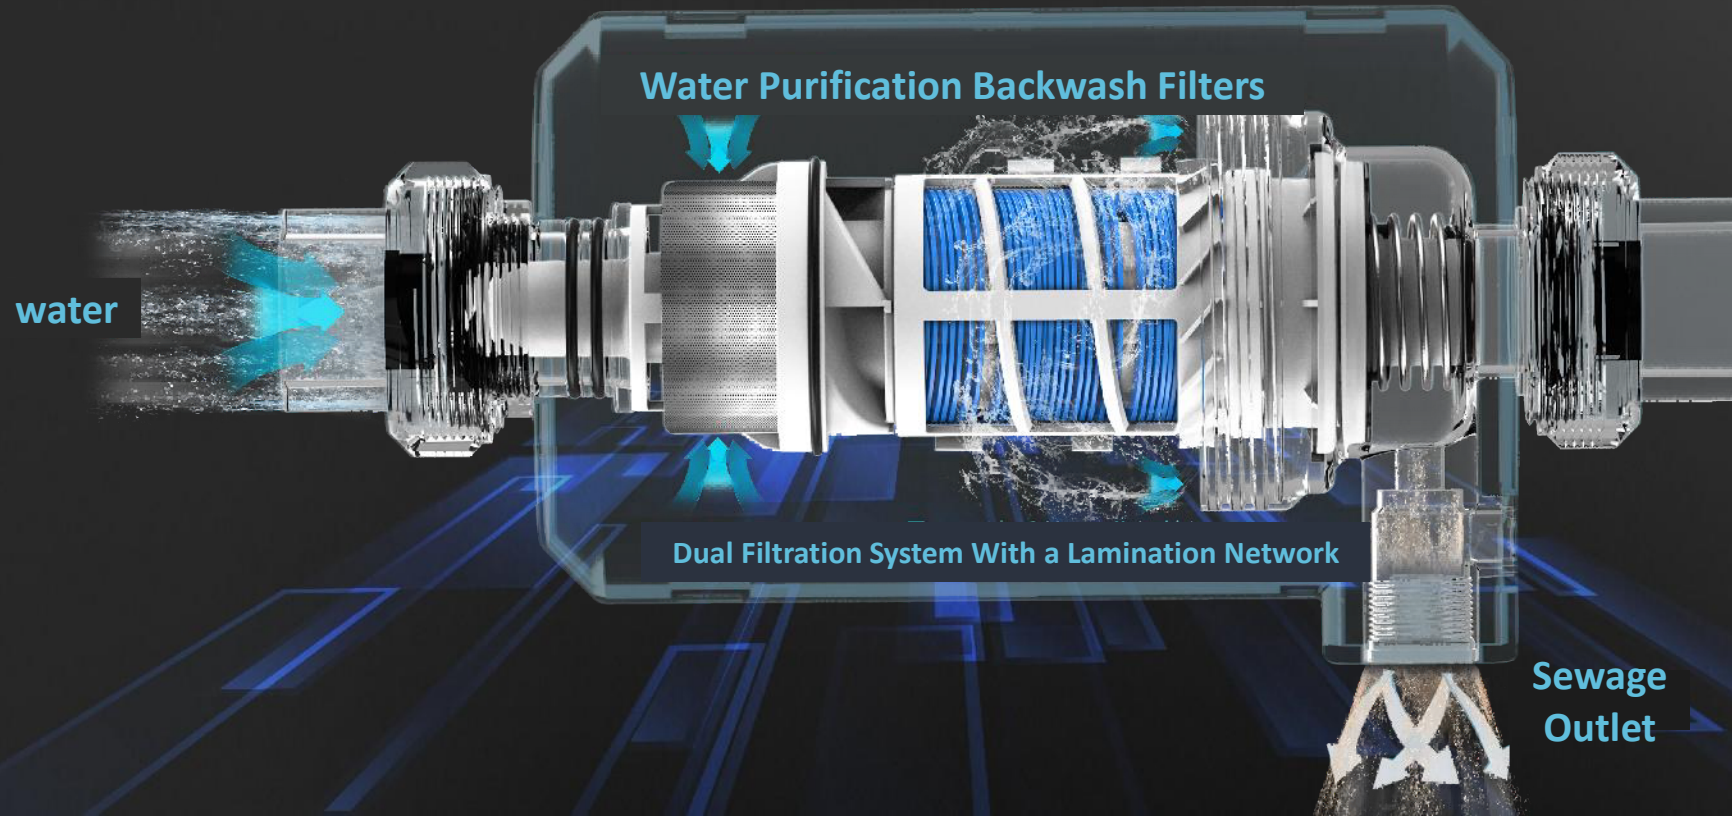

Dual filtration disc water prefilter

bionic disc filtration technology

High efficiency backwashing systems for water purification

Industrial grade fouling resistance with no fear of clogging, suitable for more complex water conditions. | Backwashing is extremely thorough.

when at filtration status, the filtering accuracy 100-120 micro, when at sewage discharge, the gap increased by 5 times.
and with hydraulic design, all disc has rotating and vibration to form water turbo for cleaning the whole cartridge

Dual filtration disc water prefilter

All-In-One Encapsulating Plain Weave Dense Mesh

All-in-one plain weave dense mesh

Higher and more evenly distributed filtration for a better quality of water.

Plain weave dense mesh

Plain weave dense mesh film

Dual filtration disc water prefilter

Dual Filtration with Lamination Network Extraordinary Flow Rate

Ultra-high flow rate for water purification

Lamination for filtration of large particles, encapsulated plain weave dense mesh to prevent dirt clogging.

Fully meets domestic water requirements with high water purification flow rates of up to 6 T/h.

Higher precision encapsulation of plain weave dense mesh.

Lamination for filtration of large particles.

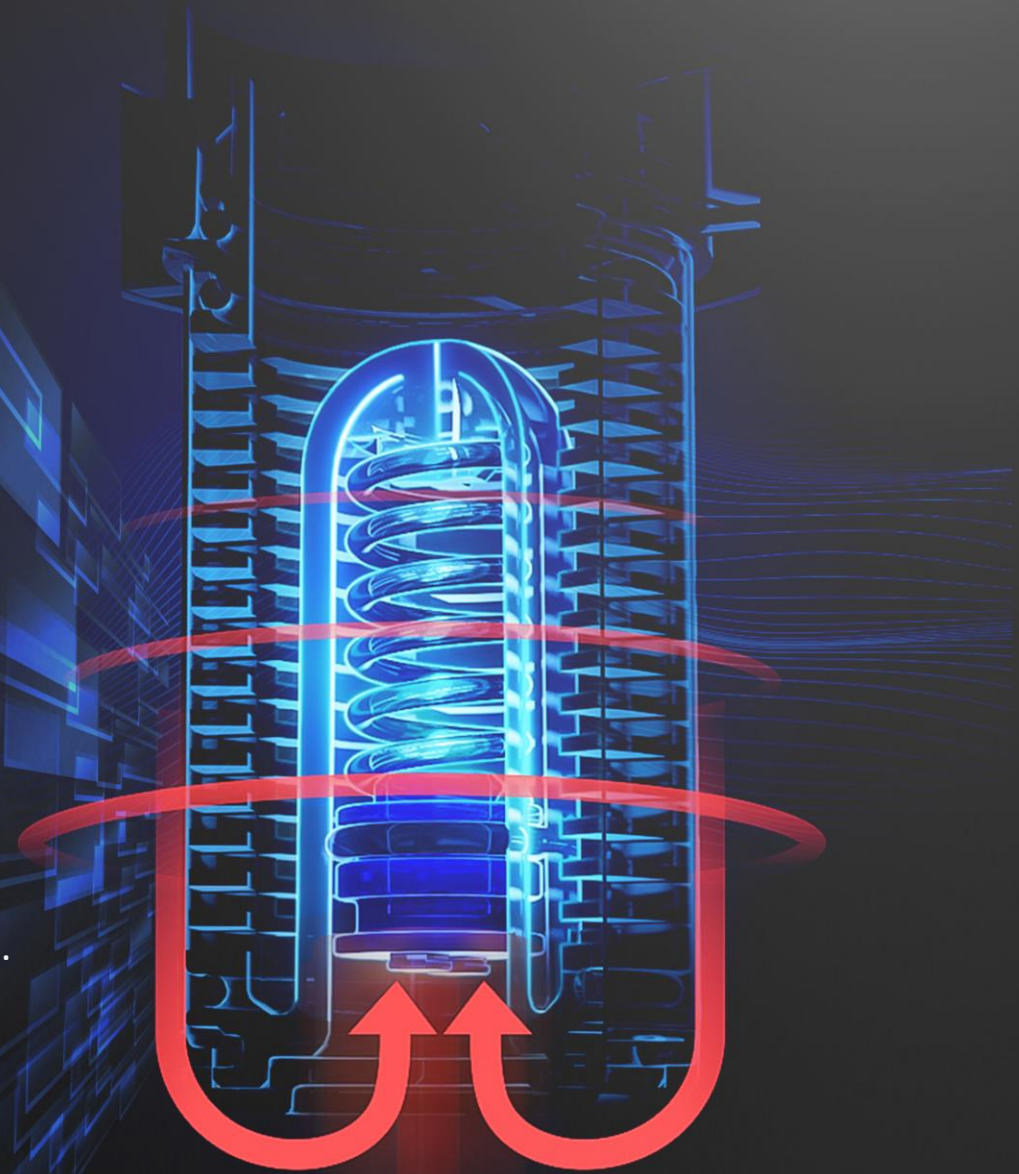

Dual filtration disc water prefilter

Elimination of Water Hammer

Withstands over 500,000 water hammer tests

Built-in water hammer arrestor eliminates the risk of water hammer.

Improved performance of pre-filters to protect back-end water-related equipment.

Dual filtration disc water prefilter

Anti-Bacterial and Anti-Algae

Antibacterial laminate

Effectively prevents bacteria from growing in the cartridge.

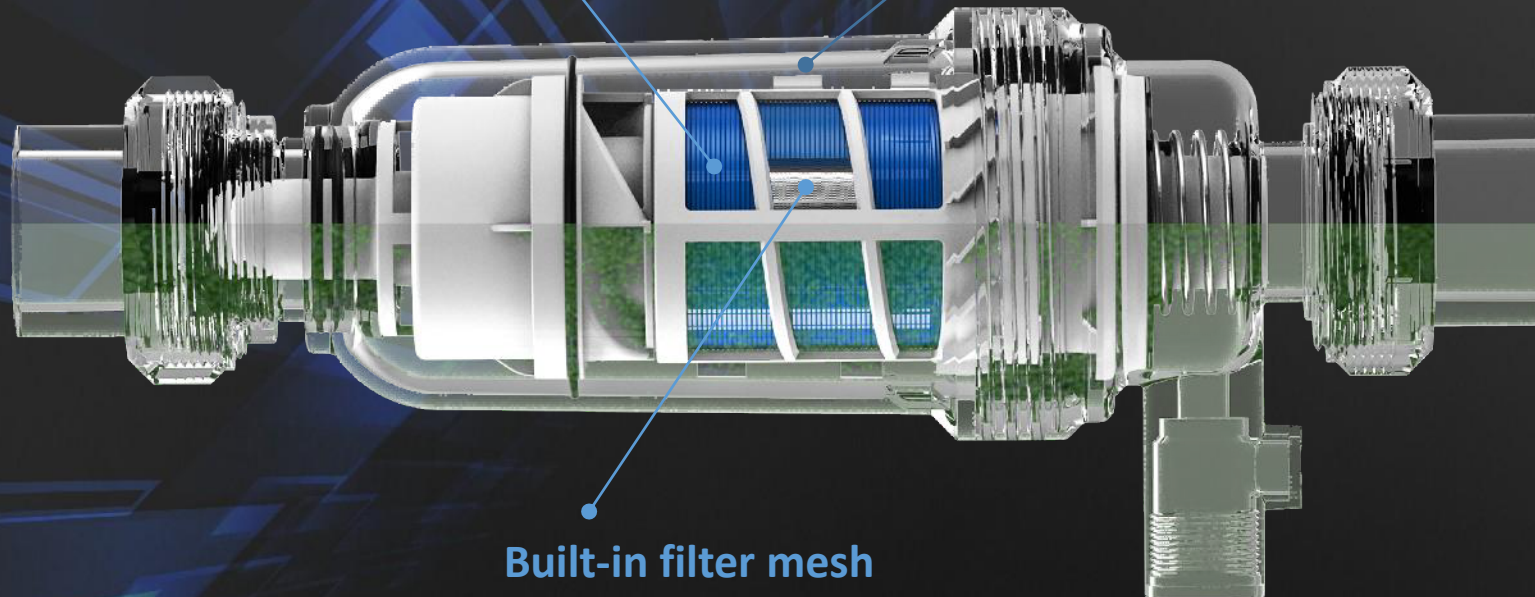

Prevents secondary contamination.

Water flooding auto-rotation spoiler scrubbing technology

Avoiding the growth of colloids and green algae in filter bottles.

Built-in filter mesh

Prevents the growth of green algae in sunlight.

Dual filtration disc water prefilter

Lead Insulation and Anti-Freeze

Extreme freeze protection down to -30°C

Anti-bacterial and lead insulation technology: The metal part uses an integrated antibacterial lead insulation technology that inhibits bacteria while eliminating heavy metal contamination.

Freeze protection for the entire machine : It can withstand freezing temperatures as low as -30°C . This means it can withstand the pressure of the cold with ease and safety.

Dual filtration disc water prefilter

Technical Certification Security Upgrade

Water-contact materials tested by international authorities
such as SGS and NSF.

Tested and approved by the Chinese Centre for Disease
Control and Prevention.
